## ACT

Add Level 3 to provide a single pane of glass for managing and analyzing devices. Allows for integration with third party building systems. 3D visualization: a “digital twin” of the building enables floorplans and heatmaps for deeper building insight.

Global policy administration enables rules and scheduling changes uniformly across multiple locations.	■	■	■	■	■	■	■	■	■	■	■	■	■
Heatmaps of real-time data								■	■	■	■	■	■

## ADVISE

Add Level 2 for deeper insight into system performance. Dashboards, reports and alerts for building performance insight and issue identification. Dashboards provide real-time data and historical graphs for different data types. Time-series database for analyzing historical system data.

Real-time gauges and historical trends								■	■	■	■		
Historical energy consumption dashboards	■	■	■								■		
Automated alerting via text or email					■					■	■	■	■
Reports of alerts					■					■	■	■	■
Monthly and annual egress light test pass/fail reports					■								

## CONNECT

Intuitive drag and drop software user interface for device adds, moves and changes. A live monitoring page provides a real-time snapshot of all devices on the network. Devices can be grouped into zones for localized control. Rules and schedules can be created for automating lighting control strategies throughout the day and egress light testing.
