TRAINING FACILITY

The IBEW 363 training center in New York, NY is always looking to push the envelope. They are responsible for training new apprentices as well as experienced electrical contractors for continuing education. Keeping up with new ways of accomplishing things is important, especially when there is rapid market adoption or time saving techniques available. In this case, Platformatics had something to offer that serves as both an educational and very functional set-up for the IBEW.

With dynamic LED lighting and simple PoE devices, Platformatics was able to turn training space at the IBEW 363 in New York into a functional

demonstration of the power of this technology itself. The variable intensity and color temperature of the lighting system means that there is precision control to affect the room conditions to make them optimal for different people at different times. This also provides the most direct training experience for young people that are new to the profession as well as experienced veterans who are looking to expand their knowledge.

The next generation of electricians are going to be well versed on PoE as a solution for smart buildings, as well as developing new applications or uses for it. That is something that the entire profession can get excited about.

- ▶ **EASY TO USE**
- ▶ **SIMPLE INSTALLATION**
- ▶ **GRANULAR MONITORING**

“While many people feel uncomfortable adopting new technologies, we’re using Platformatics to prepare for the future of our members and customers.”

BILL EDWARDS, TRAINING DIRECTOR
